Caring for Oncidium Orchids

Temperature

As a general rule, a day temperature of about 21°C (70°F) in summer, 16°C (60°F) in winter and a drop at night of 6°C (10°F). Cool nights are important.

Position

Good light, shaded from direct sunlight. Orchids need 10-15 hours of light each day - in winter supplement daylight with artificial light.

Water

Keep compost moist - reduce watering in winter. Use soft, tepid water.

Humidity

Moist air is essential. Mist leaves occasionally.

Aftercare

Repot only when growth begins to suffer.
