Wisteria

A deciduous woody climber that has a vigorous growth habit and produces masses of flamboyant cascading flowers in the spring, that are sometimes perfumed.

Needs to be planted in full sun in well drained soil.

Wisteria can be trained to grow along a trellis or an arch, to create a stunning feature in the garden.

Regular pruning is needed to ensure annual flowering.

Feed with a granular feed in the autumn and keep well-watered throughout the year, particularly in dry and/or windy conditions.

Eventual Height and Spread: 10m x 10m
